INSIDE THE PATCH

by Dennis Blank, Editor

Later this month, members of the ND Petroleum Council will hold their annual meeting at Medora. It is a great setting for the oil industry as it sees its growth not only in the recovery of the state's oil resources but also in meeting the challenges of finding new and better ways to recover more oil, and to be more cognizant of the land and the landscape. **Medora—a replica of a wild west town—is the product of Harold Schafer, a self-made millionaire whose generosity and entrepreneurial spirit created a famous tourist attraction in a state that had pretty much been barren of places for tourists to go.** I met and interviewed Schafer many years ago. His love of God and his state permeated the conversation. His dedication to Medora was evident in every word he uttered and the joy he felt in making a place where history and the west come together. He loved history and antiques. **His living room table was so famous, it had a book written about it. In his garage was a rare old Roosevelt car.** His joy about history and life

(Continued on Page 3)

1 Million BOPD Crude By Rail Rolls

As three more North Dakota crude oil rail terminals and storage tanks came on line or announced more expansion in August, BNSF Railway said it now has the capacity to move 1 million barrels a day. BNSF is moving 88.9 million barrels out of the Bakken now, a 7,000% increase since 2008.

At the same time, producers such as Statoil ASA and Phillips66 were investing in more 650-barrel rail tanker cars to their Bakken crude to US refiners.

“The ramp up of production from our onshore assets in North America grows rapidly,” said Torstein Hole, senior vice president of US Onshore for Statoil, which bought Brigham Oil and Gas assets. **“The rail solution supporting the Bakken business will increase the value of the oil significantly. This translates to substantial profits as production continues to grow.”**

That company has invested in leasing 1,000 rail cars to move crude from North Dakota and its holdings in other oilfields.

Power Fuels Sold; Recycling Growth Seen

Power Fuels, the leading water, salt water and crude oil hauler in the Williston Basin, was bought in a \$381 million stock and cash in deal by the publicly-held Heckmann Corp. of Pittsburgh that hopes to leverage the transaction into a \$1 billion nationwide business that will expand into more water recycling ventures.

Mark Johnsrud, the owner of Power Fuels, will become the new CEO for Heckman and also be added to the board of directors as vice chairman.

Sinclair Will Pay \$3.8M Refinery Fine

Sinclair Oil Corp. will pay \$3.8 million in fines stemming from air pollution emission violations at two Wyoming refineries in Casper and Sinclair in a settlement reached in August with the US Dept. of Justice and the Environmental Protection Agency.

Under the terms of the agreement, Sinclair will spend about \$10.5 million on pollution control equipment to reduce emissions of nitrogen oxides to about 24 tons per year, sulfur dioxide by 385 tons per year and particulate matter by about 385 tons per year.

"This settlement holds Sinclair accountable for exceeding the emission limits agreed to in a previous settlement for the Clean Air Act violations and ensures that the people of Wyoming have cleaner, healthier air," said DOJ attorney Egnacia S. Moreno.

Sinclair will upgrade its flare gas recovery system and install a selective catalytic reduction system.

At the same time, Sinclair has reported four minor fires at its refinery near Rawlins in the last three months. Two fires in May resulted in severe burns to six employees.

Kodiak Posts High Online Bid

Kodiak Oil and Gas, Inc. of Denver was high bidder at the ND Dept of Trust Lands online auction, paying \$7,003 an acre for the 80-acre tract in Williams County.

According to Energy Net, which conducted the bidding, Kodiak paid a total of \$571.854 for the parcel located in Sec. 14, T154N-R98W. The online bidding ended Aug. 16 with 23 registered to bid.

More Cars; More Tankage; More Terminals

(Continued from Page 1)

"The number of trains will vary," said Statoil spokesman Ola Morten Aanestad. "It will increase over time as our production grows. Currently we produce around 40,000 bpd, but this will increase."

The Statoil decision follows the announcement in June by Phillips66 that it will buy as many as 2,000 tanker cars to move crude by rail from North Dakota, Colorado and other oilfields

BNSF said it is investing \$197 million this year in North Dakota and Montana including 2,188 miles of track surfacing, as well as replacing 121 miles of track and 332,000 railroad ties.

"Because this shale development growth came about so quickly, there has been a shortage of pipeline capacity to deliver production from new unconventional sources to coastal refiners," said John Lanigan, executive vice president and chief marketing officer for BNSF. The railroad now serves eight terminals and that will increase to ten by the end of the year as it moves crude to 30% of refineries in eight states.

Savage Industries started moving unit trains in late August out of its new Trenton, ND terminal for Statoil and other producers and will soon be loading two unit trains a day.

At the same time, the Bakken Oil Express Terminal in Dickinson is ramping up to move two unit trains a day by December, according to Chris Lewis, terminal manager.

It now has two 90,000-barrel holding tanks and is completing construction on an additional two storage tanks, each holding 105,000 barrels.

That terminal is also adding more staff as it moves to a 24-hour facility and will start receiving frac sand shipments soon.

In addition to the Dickinson and Savage terminals, more tankage is being added to some of the 13 rail loading terminals in the state.

United Development Group is building a 95,000-barrel tank at its new VanHook terminal that will be ready in October. UDG also announced recent expansions at its St. James facilities, enabling it to unload more rail cars at one time.

The increased tankage is being encouraged by producers.

Continental Resources of Oklahoma City, the largest producer in the state, is encouraging more storage at the loading yards "which makes off loading trucks much more efficient," said J. Warren Henry, vice president of investor relations.

The latest figures from the ND Pipeline Authority show that 325,000 barrels a day—about 44% of North Dakota's oil production—were being shipped out of the state by rail.

What is pushing the demand for more rail transportation is the better pricing for Bakken Crude at markets such as St. James, LA where the price paid has been about 18% difference to the posted Brent crude price.

Even so, eastern refiners are also offering attractive pricing as Hess Corp. and others now have the flexibility to move their oil to more competitive markets.

EOG Resources and NuStar Logistics partnered to complete a new 70,000-barrel-per-day unit train offloading facility at St. James in May for crude oil deliveries from North Dakota and Texas.

The partnership exceeded a \$40 million investment, installed two new storage tanks with a total capacity of 360,000 barrels and additional track for unit trains.

Hess Wants \$1.7 Billion Drilling Program in McKenzie

Hess Corp. asked for approval of a massive drilling program of 159 horizontal wells costing over \$1.7 billion in McKenzie County.

In an Aug. 22 hearing before the ND Oil & Gas Division, the operator estimated the average recovery per well at 511,000 barrels of oil on a 30-day initial production of 1,342 BOPD.

Hess asked for approval of seventeen 1280-acre spacing units with eight wells each and an overlapping 2560-acre spacing unit in sections 9, 10, 15 & 16, T151N-R95W with three wells and 640-acre spacing with four wells on Sec. 9, T150N-R95W.

The 1280-acre spacing would be located in sections 3 & 4, 5 & 6, 7 & 18, 8 & 17, 10 & 11, T150N-R95W; sections 3 & 4, 5 & 6, 7 & 18, 8 & 17, 9 & 10, 15 & 16, 19 & 20, 21 & 22, 28 & 33, 29 & 32, 30 & 31, T151N-R95W and sections 25 & 36, T151N-R96W.

At the same hearing, it also asked for approval to drill 16 wells on two different 1280-acre spacing units, also in McKenzie County, estimating the same amount of recovery per well and capital expenditure of \$10.5 million per well.

In Stark County, Hess wanted approval of six wells per 1280-acre spacing unit in sections 5, 7, 8, T140N-R95W.

Savage Trenton Terminal Moving Unit Trains

Completion of Savage Industries crude rail loading terminal at Trenton, ND, enables the company to move unit trains from the 274-acre facility to refinery destinations on the east and west coasts as well as the St. James, La market. It is supported by 298,000 barrels of tankage on the location.

With an 8,300-foot loop track, the terminal has the capacity to service two 118-tanker car unit trains. One tanker car holds about 650 barrels.

"This terminal adds crude by rail transportation to the area's existing pipeline capacity, to maximize the options producers have to get crude to refineries," said Nathan Savage, senior vice president for business development. "We are excited to provide a unique open terminal that will meet a critical need in the oil industry."

Since, Dec., 2011, Savage has been loading tanker trucks directly on rail tanker cars.

Savage will also serve as a receiving station for incoming shipments of frac sand, aggregates, tubular goods, natural gas liquids, construction materials and various bulk products.

"We look forward to working with Savage and other producers and receivers to expand oil by rail shipments while helping to create more jobs and reduce our dependence on overseas production," said Dave Garin, group vice president for industrial products for BNSF Railway.

The terminal has access to BNSF main track and has several truck receiving stations and tankage.

Between five and seven crude oil unit trains leave the Savage Industries terminal in Trenton, ND every week. Shown here are the automatic loading facilities that can fill twelve 650-barrel tanker cars at a time.

INSIDE THE PATCH

(Continued from Page 1)

was infectious and so hopefully that spirit will prevail during the industry meeting.

Republican Presidential candidate Mitt Romney unveiled his energy plan last month that would create 3 million new jobs, open up more federal land for exploration and give the states more regulatory authority instead of the heavy hand of the federal government. The industry applauded this new direction. **"Western Energy Alliance is pleased that Governor Romney's energy plan recognizes that empowering states, rather than imposing a one-size-fits-all federal government approach, is the right way to increase American energy, create jobs, and grow the economy,"** said Kathleen Sgamma, a WEA executive. What a contrast to four years of the Obama Administration's heavy hand towards the industry, which squeezed its administrators to slow down permitting, delay drilling in the Gulf of Mexico. **Its harsh, hostile attitude was exemplified in the EPA administrator from Dallas who sought to "crucify" the oil and gas industry.** If Romney is elected Nov. 6—and we believe he will be—watch the news the day after and see how quickly business and banks spend money to get this country going again.

Part of the problem with big government and Congress has been what I call the "hand out" mentality. If congressmen came back to their states with loans and grants, they believed that guaranteed reelection. We have gotten used to the idea that if towns and counties need a new bridge, a new road, a new sewer plant, they believe Washington, DC will also be there to pick up part or all of the tab. **To secure even more votes, politicians starting getting more grants for foolish things.** A good example was the \$450,000 grant a couple of years ago to the Basin Electric from former Sen. Byron Dorgan, a Democrat, to see if North Dakota needed a new refinery. Fact

(Continued on page 52)

QEP Proposes A Dozen Lake Wells

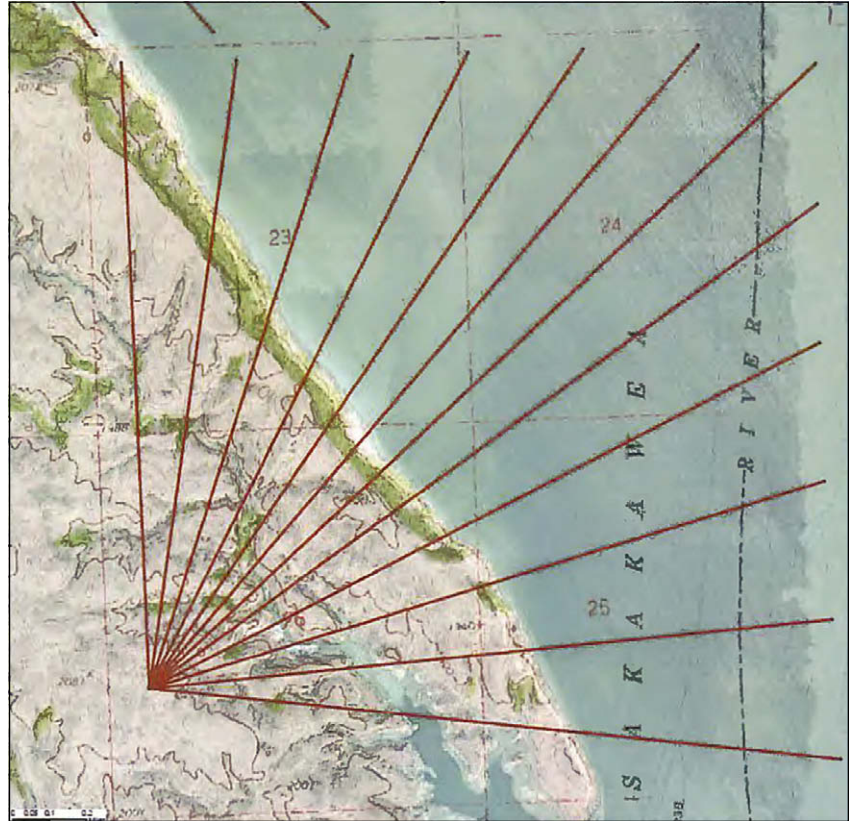

QEP Energy Co. of Denver said it would use 55% less surface area and save \$675,000 by drilling 12 wells from a single pad on 2560-acre spacing under Lake Sakakawea. The area is located both in Dunn and McLean counties in sections 23 & 26, 24 & 25, T149N-R91W.

The company, which recently increased its acreage position in North Dakota, said it would also use "batch drilling" system that would save money and drilling time.

Using this technique, wells would be drilled to the seven-inch casing point in groups of four wells. Drill pipe is changed and mud weight increased as the laterals are drilled. "Batch drilling combined with skidding to wells within clusters saves three to five days per well," QEP told the ND Industrial Commission.

In a hearing before the commission's oil & gas division Aug. 22, QEP proposed the 12-well pad because most of the area is under water and the rugged land has several archeological and cultural sites.

The company estimated each well would cost \$11 million, have an ultimate recovery of 481,000 barrels and drilling would start in 2014.

QEP Resources of Denver wants to drill 12 horizontal wells off a single well pad on 2,560-acre spacing under Lake Sakakawea, for a cost savings of \$675,000.

QEP Buys Williston Basin Production

QEP Resources of Denver paid \$243 million to acquire 73 producing wells and leases on 28,000 net acres in North Dakota from Black Hills Corp. of Rapid City.

Production from these assets, located 12 miles west of its current holdings, total 149,000 barrels of oil and 171,000 Mcf of gas.

"The acquisition will add a new contiguous block of QEP-operated acreage in a localized 'sweet spot' for both

the Bakken and Three Forks formations, as evidenced by above average well performance and EURs from wells drilled to-date in both reservoirs," said Chuck Stanley, chairman, president and CEO of QEP. "We expect the growth potential of these assets to have a significant impact on our overall production, and more specifically on our crude oil production."

In another deal, QEP paid \$268 million to Unit Corp. for producing assets in Texas.

BakkenLink Start Up OK'd by PSC

The ND Public Service Commission late in August authorized the start of construction on the \$126.5 million BakkenLink crude oil pipeline that runs over 123 miles from Tioga south into Stark County.

Dunn County has been eliminated in the routing of the pipeline which will cross under Lake Sakakawea and also feeds into Billings and McKenzie counties.

Great Northern Midstream, which is the parent company of BakkenLink, has received initial shipper support for moving 65,000 BOPD. The company is still waiting on formal approval from the US Army Corps of Engineers and the Bureau of Land Management to cross under Lake Sakakawea.

The 12-inch main pipeline will also have three eight-inch laterals to connect to expanding oilfields.

MPA Opposes New State Pipeline Regulators

While several environmental groups have called for more state oversight of pipeline safety, the Montana Petroleum Assn. said in August the federal agency that already regulates pipelines is much better suited to do the job rather than creating more state agencies.

"Duplicate regulatory bodies have the ability to create a confusing and sometimes contradictory regulatory environment, including conflicting jurisdictions," said David A. Galt, executive director of the MPA.

The MPA urged the state to support the work of the existing regulators rather than creating "redundant and potentially conflicting regulatory bodies," Galt said.

The issue came up at the Montana Oil Pipeline Safety Review Committee meeting in Helena as it considered recommendations including new state laws to regulate pipeline work.

The committee was created following an accident in the Yellowstone River a year ago during flooding when an estimated 1,000 barrels from the ExxonMobil crude oil line under the river bed broke and was released into the flood waters.

At the same time the Pipeline and Hazardous Materials Safety Administration under the US Dept. of Transportation reported on the progress of remediation work of three pipelines crossing creeks or rivers will be wrapped up this year. That included ExxonMobil, CHS and Phillips 66 pipelines.

OILFIELD WATER TREATMENT

REUSE YOUR WATER AND REDUCE YOUR COSTS

HIGHLY MOBILE Trailer unit for on location treatment. Rapid deployment to remote site with pickup truck. Adaptable to well pad configuration.

SCALABLE & RELIABLE It is scalable to accommodate a variety of flows. It also comes with enhanced system redundancy.

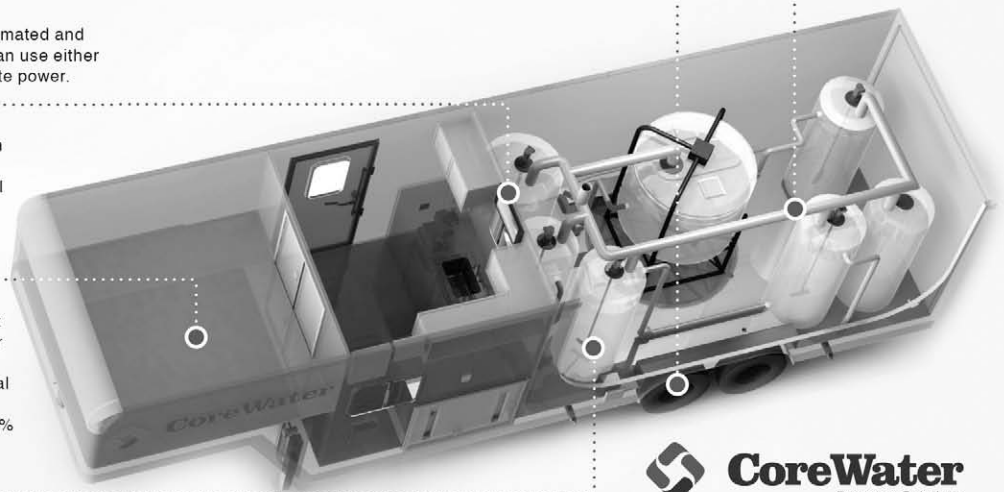

SELF CONTAINED Fully automated and remote monitoring capability. Can use either internally generated power or site power.

ECO FRIENDLY Reduce fresh water usage, truck traffic, potential spills and disposal well related issues. Delivers over 99% effluent for reuse with no liquid waste stream.

HIGHLY FLEXIBLE treatment of wide range of flows and water chemistries. Conventional treatment technology for removal of TSS, Organics & Scalants. Hardness is reduced by over 70% and final pH is adjusted to the user's criteria.

Two Waste Oil Treating Facilities Seek ND Approval

Two separate companies sought approval in August for waste oil treating facilities in North Dakota's McKenzie County.

Marquis Alliance Energy Group USA, Inc. of Denver asked the ND Industrial Commission for approval to build a multi-faceted treating facility in Sec. 14, T152N-R96W. TD Services of Dickinson, ND wants approval to set up a plant in Sec. 35, T151N-R96W.

The Marquis facility would have two 1,000-barrel waste heated process tanks and two 1,000 barrel heated mud tanks. In addition to other equipment including an off loading facility, the company will meter clean oil tank sales.

Salt water will be sent to a disposal well and sand sent to a waste processing tank.

TD plans to have a mix tank for chemical treatment if necessary and then run the waste oil and fluids through a shaker to remove large solids. Salt water will also be separated for a disposal into a well system.

The 24-hour facility estimates it could handle up to 500 barrels a day. Solids will be put into a solid waste holding bin and then taken to approval disposal facility.

Protests On Salt Well Aired In ND

North Dakota state regulators heard protests against a proposed salt water disposal well in Dunn County at an Aug. 22 hearing in Bismarck.

Most of the objections from nearby landowners centered on noise and additional truck traffic at the location in Sec. 18, T144N-R95W proposed by Borejaks Energy Services.

The company said it has agreed to take water samples from nearby fresh water wells and solve the issue over noise coming from the water trucks' "Jake" engine brakes.

One land owner, Delbert Koberstine, said the disposal well "could potentially ruin domestic water sources of nearby homes". Another landowner, Robert Kovaloff, said the additional truck traffic would cause congestion and increase the risk of accidents.

NATURAL GAS PRICES

Even with half of the natural gas production still shut down in the Gulf of Mexico, prices continued to remain steady Sept. 4 as traders at the New York Mercantile Exchange paid \$2.86 per mmBTU for September delivery.

The price of natural gas is expected to stay about the same for the next month, according to financial traders, until more demand increases with cooler weather. Inventories still remain high as well.

The Henry Hub benchmark spot price was at \$2.74 per mmBTU. The latest spot prices paid at these regional hubs on Sept. 4 were:

Chicago City Gate	\$2.72
Questar	\$2.50
Opal Hub.....	\$2.60
Ventura, IA Hub	\$2.79

For the most recent gas price updates, visit the Oil Patch Hotline website:
www.oph.hotlineprinting.com

US Rig Count

The nationwide rig count on Aug. 31 dropped four rigs for a total of 1,894 rigs, and was 74 less than were drilling at this same time last year, according to Baker Hughes.

There were 1,419 drilling for oil and 473 drilling for gas, and 2 were listed as miscellaneous in the latest tally.

In the last two weeks, North Dakota dropped five rigs and Colorado lost two. The latest count for the upper Rocky Mountain area as of Aug. 31 is:

Colorado	61
Montana.....	22
North Dakota.....	192
South Dakota.....	1
Utah.....	39
Wyoming.....	52

CRUDE OIL PRICES

Crude oil prices jumped on the New York Mercantile Exchange Sept. 4 in early trading, where the price went up to \$97.35 a barrel for September delivery. The price for Brent crude was listed at \$114.93 and WTI Cushing was at \$96.00.

Central banks in the US and Europe indicated there could be more stimulus to boost economic growth, which would spur the demand for raw materials including oil.

"Speculators are looking to bet that the European Community Bank will deliver more stimulus," Michael Poulsen, an analyst at Global Risk Management in Middelfart, Denmark, told Bloomberg. "It will be a balancing act for the ECB. In the oil market, the medium- and long-term trend remains for higher prices."

Here are the latest prices for the upper Rocky Mountain states from Plains Marketing as of Aug. 31:

	Plains
Colorado Western	\$81.08
D-J Basin	\$82.30
Colorado Southeastern.....	\$83.85
Williston Basin Sweet	\$71.18
Williston Basin Sour.....	\$74.58
Wyoming Sweet	\$78.10
SW Wyoming Sweet.....	\$80.58
WY General Sour	\$56.78
WY Asphaltic Sour	\$64.83
Utah Black Wax.....	\$81.20

SM Adds Rig

SM Energy of Denver said capital spending for the year in its Williston Basin holdings will range between \$160 million and \$185 million as it keeps four rigs drilling. Production for the company is now at 10,400 BOPD and next year as it moves towards more infill and multi-well pad drilling. SM Energy is also participating in a number of non-operated wells.

ENERGY INDUSTRY STOCKS

MOHALL, ND 58761

THANK YOU!

The American Petroleum Institute (API) would like to extend their appreciation and thanks to the sponsors and the many volunteers giving their time and support to our 32nd Annual API Golf Tournament that was held at The Heart River Golf Course on August 18th & 19th. Without all of the support and help, this tournament would not be possible.

We Would Like To Thank The Following Sponsors For Making This Event Possible:

ND Approval Sought For McKenzie Spacing

Continental Resources estimated recovery from each of the four wells it is proposing in a 1280-acre spacing unit in McKenzie County would be 495,000 barrels based on an initial production rate of 800 BOPD.

At Aug. 23 hearing before the ND Oil & Gas Division, Continental asked for approval of the spacing in sections 15 & 22, 27 & 34, T152N-R99W.

Also in McKenzie County, Burlington Resources Oil & Gas Co LP asked for approval to drill seven horizontal wells on 1280-acre spacing in sections 14 & 23, T152N-R95W and up to eight wells on 1280-acre spacing in sections 15 & 22, T152N-R95W.

In addition, Burlington requested approval of an overlapping 2560-acre spacing unit in sections 14, 15, 22 & 23, T152N-R95W. The company estimated drilling costs would total \$10 million and anticipated an ultimate recovery from each well of 450,000 barrels of crude oil.

Burlington also asked for approval in the same county to drilling four horizontal wells on 1280-acre spacing in sections 1 & 12, 2 & 11, 13 & 24, 14 & 23, T148N-R98W as well as two overlapping 2560-acre spacing units in sections 1 & 2, 11 & 12, 13, 414 23 & 24, T148N-R98W.

Long Lateral Well Okay Wanted By OXY

OXY USA, Inc. asked for approval to set up a 1920-acre drilling or spacing unit in Dunn County where it wants to drill four wells exceeding 25,000 feet at a cost \$11.8 million each.

At a hearing before Aug. 22 before the ND Oil & Gas Division, OXY asked for the spacing in sections 23, 26 & 35, T142N-R96W with lateral lengths reaching 15,000 feet—about 5,000 feet farther than most laterals.

The company expects an ultimate recovery of 700,000 barrels per well.

In other business, Slawson Exploration of Denver sought approval for 1280-acre spacing in Mountrail County in sections 15 & 22, T151N-R92W for six wells with an expected ultimate recovery of 450,000 barrels and a single well drilling cost of \$8.2 million.

Bakken Finance Summit Features Top Executives

Several issues included crude oil rail expansion, pipeline building, housing and financial investments will all be addressed in a three-day conference Oct. 23-25 in Denver at the Westin Denver Downtown.

Rick E. Muncrief

Michael Schaal

Among the speakers addressing the Bakken Infrastructure Finance & Development Summit will be Continental Resources executive Rick E. Muncrief and Energy Information Administration official Michael Schaal.

Also on a tap is an analysis of Bakken production economics compared to capacity for crude oil, NGLs and natural gas by Jodi Quinnell, an analyst with Bentek Energy.

There is a panel presentation on the pipeline build out as well as refinery expansion updates.

Larry Daily, president of Alter Logistics, will compare the progress of pipelines and crude oil unit train movement while a panel of industry leaders will evaluate rail opportunities in North Dakota led by Paul Hentschke with Transystems.

Kevin Cook, global director of the rail transportation group for Midland Manufacturing, will detail the status of tanker car manufacturing.

For more information on registering, email: mail@infocastevents.com and use Registration Code BK1B12 or call 1-888 888-4444.

Corinthian Seeks OK For Bottineau Wells

Corinthian Exploration (USA) Corp. of Souris, ND asked for approval of spacing in Bottineau County to drill shallow horizontal wells with an expected recovery of 60,000 barrels of crude oil.

The company wants to drill three wells on 480-acre spacing in sections 33 & 34, T164N-R77W and Sec. 4, T163N-R77W.

At a hearing before the ND Oil & Gas Division Aug. 23, the company also asked for 320-acre spacing as well as 160-acre spacing in the same county. The wells would be subject to 15-stage fracture stimulations.

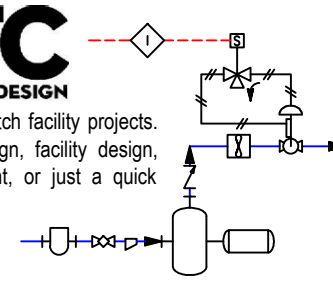

Corinthian estimated it would cost \$800,000 to drill each well in Sec. 35, T164N-R77W as an exception to the applicable location rules set by the state.

Bakken Differential Prices Analyzed At Pipeline Conference

The differential prices paid for Bakken crude oil will be analyzed at the Platts Pipeline Development & Expansion conference Sept. 20-21 in Houston at the Houston Marriott West Loop.

The impact of differential prices and particularly their impact on refineries will be discussed by John Auers, senior vice president for Turner, Mason & Co., while Lucretia Cardenas, associate editor of Americas Crude Oil, will look at Bakken oil price impact after the Seaway Pipeline reversal is completed.

At the same time, James Cairns, vice president of petroleum and chemicals for CN Rail, and Gary Lewis, senior vice president for Rail America, will both look at the growth of crude rail programs and new destinations that are opening up in North Dakota.

Other speakers will discuss, several pipeline projects as well as the Houston Ship Channel Pipeline and Storage Project.

To register for the conference, email registration@platts.com or call 866 355-2930.

Lynn Moser, owner of Inland Oil and Gas of Bismarck, was recently presented with the Landman of the Year award from the Landman's Assn. of ND. She is shown here with her father, Berk Strothman, who received the award in 1982. Moser has served as president and on the board of L.A.N.D and also serves as a board member of the ND Petroleum Council.

Canadian Firm Launches WY Manufacturing

Ridgeline Energy Services, Inc. of Calgary is locating new manufacturing facilities on a former school campus in Deaver, WY.

The seven-acre campus has five buildings totaling 65,500 square feet where it will manufacture storage systems, convergence and degassing systems and molded tank productions for use on its waste water treatment facilities.

"This facility will enable Ridgeline to lower manufacturing costs, accelerate system delivery times and continue the development of the technology," said Ridgeline CEO Tony Cor. "We look forward to revamping production in our Wyoming facility to support our growth going forward."

Ridgeline is paying a small annual lease fee and has the option to buy the buildings in the future.

COGA Ads Cite Job Loss From Local Regs

The Colorado Oil and Gas Assn. launched an ad campaign that criticizes local governments for imposing new regulations that are driving oil and gas jobs out of the state.

In the ads, Justin Williams, who owns a small transportation company and employs 15 Colorado residents, said that he is working in North Dakota because the local towns are continuing to “push out oil and gas jobs” even though the state has the toughest energy regulations in the US.

“More regulations and delays force my employees to work away from their homes and families rather than creating new jobs here in Colorado,” Williams said in the ad. He urges residents to tell members of the Colorado Springs City Council to say no to “unnecessary energy regulations”.

“We have long recognized that there is an important and appropriate role for local jurisdiction land use regulations as long as they are aligned with the Colorado Oil and Gas Conservation Commission,” said Tisha Schuller, president of COGA.

Encana Builds Land-Saving Pads

Encana Oil and Gas (USA) demonstrated how it effectively conserves land space building multi-pad wells in Colorado at the annual meeting last month of the Colorado Oil and Gas Assn.

YES WE ARE HIRING!
CURRENTLY LOOKING FOR
TRUCK DRIVERS AND FLEET MAINTENANCE ASSISTANT

FALCOENERGY

Are you tired of traveling to your current job?

Falco Energy has immediate full time openings for **Class A CDL Crude Oil Drivers** and **Fleet Maintenance Assistant** at our Williston, ND location. Previous experience preferred, but will train the right candidate. Competitive wages and benefits available!

Oil field housing? We know the drill.

Over 2500 beds in the Bakken. And more on the way.

Before you can get oil out of the ground, you need the infrastructure to get workers into the field. And no one can do that better — or faster — than Target Logistics. Last year, we brought four lodges and almost 1,000 beds to the Bakken. This year, we've expanded to over 2500. What's next? You tell us what you need, and we'll make it happen at the speed and quality standards we're known for. To learn more visit targetlogistics.net or call 800.832.4242.

Heckmann Purchase Spreads Power Fuels Business

(Continued from Page 1)

The sale, which includes \$125 million in cash and 95 million shares of Heckman with a total value of \$256 million, is based on a price of \$2.69 a share. Heckmann will also assume \$150 million of Power Fuels debt and the transaction is expected to close in the fourth quarter.

With Power Fuels 1500 employees, the total company will have 3,000 workers and a presence in seven basins. Power Fuels has 500 trucks and vacuum trucks, 19 salt water disposal wells and owns 2,500 frac tanks, 1,600 fluid handling tanks and solid waste tanks.

"We are very excited about the transaction," said founder Richard Heckman.

Johnsrud said that with 200 wells coming on line every month in the Williston Basin, Power Fuels will have a steady business for the next 20 years, particularly in fracing and refracing production work.

The growth opportunity will now come in being able to provide recycling and water reuses in other states because Heckmann has 33 facilities in 19 states.

"Our customers were moving to other basins and we were not in a position to do that," Johnsrud said.

Heckman has set up a recycling division headed by James Devlin who will lead the expansion of waste oil and water separations technology for reuses and recycling.

"A key strategy going forward will be leveraging this experience and technology to bring additional productions, services, and expertise to our customers," Devlin said.

Johnsrud, who bought the company in 2004 with 40 employees and \$6 million in revenues, has now grown the business to \$155 million in revenues.

He retains ownership of new employee apartment complexes in Watford City, Dickinson and Tioga as well as 100 plus mobile home parks.

The corporate headquarters of the combined company will be moved to Scottsdale, AZ, the location of Thermo Fluids Inc., which Heckman had acquired earlier this year.

Heckman has suffered from the loss of business from a decline in natural gas drilling that slowed its trucking, pipeline and disposal revenue, particularly in the Haynesville play, where the rig count dropped from 120 to 40.

Target Nears Completion On Two Camps

Target Logistics said it is nearing completion of two turnkey workforce housing projects for 664 new workers in Williston and Watford City.

The Williams County Lodge for 300 people will open this month with a 24-hour dining area along with a gym, recreation area, free self-service laundry and other amenities.

In October, the Watford City camp for 334 people will open with similar features.

“As the influx of people continues to outpace available housing, we provide workers a safe and comfortable solution, said Target CEO Brian Lash. “This first-rate level of service results in greater productivity, lower attrition and fewer onsite accidents for our clients and their employees.”

Kevin Sandstead with Phillips 66 was elected the president of the Montana Petroleum Assn. at its recent annual meeting in Billings. Other officers are: Colby Branch with Crowley Fleck, vice president, upstream; Dexter Busby, Montana Refining Co., vice president, downstream; and Mac McDermott with MCR LLC, treasurer.

FCI
CONSULTING & INSPECTION

We are a Rocky Mountain Region based corporation with offices in Wyoming, North Dakota, Colorado, Washington, and Texas. We supply the widest selection of Well-Site Supervisors in the area. FCI's dedication to Team Work, Integrity and Professionalism has made us the leader in providing Well-Site Supervisors.

THE FCI DIFFERENCE

CONSULTING

INSPECTION

WELL-SITE SUPERVISORS

All Subcontractors and Employees receive Professional Insurance Coverage, Safety Certifications and Training as well as Field support - including HR, Area, and HSE, all at our expense. ISNet support is also provided.

Our Subcontractors receive Business development assistance, rapid invoice payment, and a contract coordinator for all contract and invoicing needs.

Our Employees receive payroll benefits including tax withholding, Medical and Dental Insurances, as well as company provided PPE and FRCs.

Oil Field Steel Delivered

Structural Steel

We help clients design and build industrial buildings- from power plants and factories to processing plants; commercial buildings- from banks and hospitals to convention centers.

Tanks

Our heavy-duty Shale Bins have proven they can handle everything an oil field job site throws at them, capturing drill site tailings from mud and rock to sludge and debris.

Corrugated Pipe

Rat Hole, Mouse Hole, Well-Casing-- stocked and ready for delivery.

HELPING BUILD YOUR SUCCESS

**YOUR SOURCE.
YOUR RESOURCE.**

FEATURING... SiltSoxx™

Simple. Proven. Green...and on Pallets

SiltSoxx™ is the original mesh tube filled with FilterMedia™
Use it instead of silt fence.

It's the perimeter control device that actually works.

It stops silt and sediment leaving your jobsite, and helps keep you in compliance.

SiltSoxx™ stops pollutants in two ways: by allowing water to temporarily pond outside the sock, and by cleansing water as it passes through the sock.

Sediment is either filtered or settled out.

One more thing, Our Soxx Don't Fall Down!

INSIDE THE PATCH

(Continued from Page 3)

was, the state in the previous year, had already paid \$40,000 as part of an \$80,000 feasibility project for the real possibility of building a refinery in Trenton, ND. **In other words, the work of determining if the state need a new refinery had already been done.** There are hundreds of examples like that where the taxpayers' money is foolishly wasted. Now there is no more money and the national debt, thanks to Obama, is now at \$16 trillion.

Even in an era of great prosperity in North Dakota we see the "hand out" mentality pervading state government. Flush with enormous revenues—it is anticipating a \$3.5 billion surplus—the ND Dept. of Trust Lands is becoming the controversial sugar daddy handling money for roads, schools, emergency vehicles and other "infrastructure needs". **It is not the fault of the agency because it was given that job by the State Legislature.** We all know and acknowledge that infrastructure is needed. What we are talking about is the way it is done and the political pressure that is being exerted by one town or another fighting to get more money. **What I don't see is a lot of examination by the citizens and the media of how that money is being spent.** Costs are being inflated and nobody asks why. A good example is the Western Area Water Agency building a new water supply system from cleaned up Missouri River water in Williston fed through a costly pipeline system into outlying counties. **That agency is already plagued by cost overruns and everybody looks the other way.** It is time for the taxpayers to have a voice and do something about spending.
